**ABSTRACT**

This diagram depicts the tasks in the hydrologic monitoring location visit workflow pertaining to a subset of parameters (e.g., rainfall, groundwater level) and their associated equipment. The goal of this effort is to support the management of water resources by providing a clear and concise workflow for the location visit process. The workflow is designed to be used by staff responsible for the location visit process, including the collection and recording of data, and the management of equipment. The workflow is designed to be used by staff responsible for the location visit process, including the collection and recording of data, and the management of equipment. The workflow is designed to be used by staff responsible for the location visit process, including the collection and recording of data, and the management of equipment.
