**ABSTRACT**

This diagram depicts the tasks in the hydrologic monitoring location visit workflow pertaining to values of parameters (e.g., rainfall, groundwater level) and their associated equipment. The goal of this effort is to support the field or new efforts used to facilitate the field data collection process.

The workflows described here focus on 1) collecting and verifying data for which Aquarius is the system of record and 2) recording more management and equipment data for the equipment used to collect that data. An example of a workflow is to collect data for a specific location. The workflow is designed to be a general template and serve as the system of record for each management data and a starting area for future content. Therefore, the workflow design includes some elements open to future iterations.

The resulting effort is ongoing. Please contact the NWFWMD GIS team with comments or corrections.
