ABSTRACT

This diagram depicts the tasks in the hydrologic monitoring location visit workflow pertaining to a subset of parameters (e.g., rainfall, groundwater levels and their associated equipment). The goal of this effort is to support the field or non-field users to facilitate the field data collection process.

The workflow described here focuses on 1) collecting and verifying data for which Aquarius is the system of record and 2) recording more management and maintenance activities for the equipment used to collect that data. An example of a workflow for 1) is to collect groundwater levels and discharge data. An example of a workflow for 2) is to replace a battery in a data logger. The workflow described here is not intended to be a comprehensive guide to all possible tasks in the field. The workflow described here is intended to be a guide to the tasks that are most common and critical to the workflow. The workflow described here is not intended to be a comprehensive guide to all possible tasks in the field. The workflow described here is intended to be a guide to the tasks that are most common and critical to the workflow.

The workflow described here is not intended to be a comprehensive guide to all possible tasks in the field. The workflow described here is intended to be a guide to the tasks that are most common and critical to the workflow.
