ABSTRACT

This diagram depicts the tasks in the hydrologic monitoring location visit workflow pertaining to a subset of parameters (e.g., rainfall, groundwater levels and their associated equipment). The goal of this effort is to support the field or new efforts made to facilitate the field data collection process.

The workflow described here focuses on 1) collecting and verifying data for which Aquaplan is the system of record and 2) recording gear management and maintenance activities for the equipment used to collect that data. As a general guide, this workflow is intended to be used for all equipment. For more granular details, the equipment-specific workflow for each equipment type is available in the equipment-specific workflow documents. The equipment-specific workflow documents will serve as the system of record for gear management data, and a backup plan for Aquaplan content. Therefore, the workflow steps include some elements specific to those parameters.

The resulting effort is ongoing. Please contact the NWFWMD GIS team with comments or corrections.
