ABSTRACT

This document describes the workflow for hydrologic monitoring data collection and recording procedures for various parameters (e.g., rainfall, groundwater levels, and water quality). The goal of this effort is to support the development of new data collection procedures for the NWFWMD data collection process.

The workflow described here focuses on 1) collecting and recording data for which Aquarius is the system of record and 2) recording water management and equipment activities for the equipment used to collect the data. An abstract is provided for each step in the workflow to provide a brief overview of the equipment and procedures used. An abstract is also provided for each step in the workflow to provide a brief overview of the equipment and procedures used.

The workflow steps include some elements specific to these parameters.

The resulting effort is ongoing. Please contact the NWFWMD GIS team with comments or corrections.
